

A Test and Demonstration Arena

for products and services within Rural ITS – TDA-E16

Three test sites have been established along the European road E16 for companies who wish to test or demonstrate ITS solutions in real traffic situations outside larger city areas. The arena is established in the proximity of the Swedish Transport Administration. One test site is located in Amsberg, just outside of Borlänge. Another is in Djurås, next to the area's travel centre and the third is in central Borlänge next to the roundabout, Backarondellen, where traffic surveillance cameras are tested in conjunction with a road construction site. Each test location has spacious parking facilities and is equipped with a specially designed technical centre to ease the maintenance of equipment. At the test sites, a pylon is erected just outside the road area. This gives a possibility to test or show equipment like cameras, detectors, NFC, variable message signs etc. with very little extra effort.

Easy access to a number of public data sources is provided to be used together with your own data during test or demonstration. In order to perform a test or demonstration that may affect drivers, an approved application is required. The application is handled together with the concerned road operator in a prepared process. Different types of related services and support are offered via ITSdalarna member companies.

The test and demonstration sites are prepared and produced by the development project "Näringslivsutveckling inom ITS-området i Dalarna – Fas 2" (Trade and industry development within ITS in Dalarna – Phase 2).

The efforts are financed by Tillväxtverket, Region Dalarna, Trafikverket, Trafikverket ICT, Högskolan Dalarna, Borlänge Municipality and Falu Municipality. The project is co-financed by European Union, The European Regional Development Fund.
